CERTIFICATE of COMPLIANCE – RoHS2 General Compliance Statement

This statement confirms that Conxall Corporation is aware of the requirements of EU Directive 2011/65/EU (RoHS2) and intends to comply with the requirement in regards to material content for all standard catalog part numbers.

The products identified by the standard catalog part numbers do not contain more than 0.1 percent by weight of lead, mercury, hexavalent chromium, polybrominated biphenyls (PBB) or polybrominated diphenyl ethers (PBDE) and 0.01 percent by weight of cadmium per homogeneous material. When lead is used as an alloying element in metals the maximum is up to 4% by weight in copper alloys, 0.4% in aluminum alloys, and 0.35% in steel alloys per exemption 6.

Conxall also complies with the European Court of Justice July 1, 2008 decision to nullify the decabromodiphenyl ether (Deca-BDE) exemption to the EU RoHS Directive.

Conxall has implemented a comprehensive system for obtaining supplier declarations and material disclosures concerning the chemical composition of all components and products designed. None of our materials were analyzed for content, relying on the material supplier for Certifications and available MSDS.

We reserve the right to make material substitutions in our product that will not impact this certification.

Specific product RoHS2 Certificates of Compliance are available on request.

The signature below certifies that the statements above are accurate.
